

FIKA

A Modular Micro-Commerce Platform

A modular cargo bike platform enabling mobile businesses, services, and urban mobility.

Problem

Starting a small street business is expensive and risky

Many small entrepreneurs face high barriers:

- Food trucks cost \$30k-\$100k+
- Fixed retail leases require long-term commitment
- Existing cargo bikes can transport goods, but they rarely support business operations or modular services.

As a result, many potential micro-businesses never start.

Starting a micro-business should not require a \$50k investment.

Concept

FIKA turns a cargo bike into a business platform

FIKA is not a vehicle
It is a **business platform**

Key principles:

- Modular
- Repairable
- Adaptable
- Low barrier to entry

Modular System

Interchangeable modules enable different businesses

Use Cases Enabled by Modules

- Street food / coffee vendor
- Urban delivery logistics
- Family mobility
- Mobile repair service
- Outdoor leisure / camping

Modules can be:

- Swapped
- Upgraded
- Locally produced

Open modular interface enables third-party modules.

Real-World Use Scenarios

Street Food Vendor

Urban Delivery

Family Mobility

Mobile Repair Service

Outdoor Leisure

Why Cargo Bike

Infrastructure fit

lower regulatory barriers

lower operational cost

simple maintenance

compatibility with dense urban environments

Accessible entrepreneurship

no driver's license required in many regions

no vehicle insurance required

easier entry for newcomers and immigrants

supports grassroots urban economy

By removing regulatory and financial barriers, cargo bikes provide one of the most accessible platforms for starting small urban businesses.

Economic Logic

Lower risk for micro-entrepreneurs

Possible models:

Purchase

- Own the platform outright

Subscription / Rental

- Lower upfront cost

Module upgrades

Businesses can evolve by changing modules instead of replacing the entire vehicle.

Goal: Lower the financial risk of experimentation.

Development Path

Next Steps

Prototype development

Pilot testing with real micro-business users

Collaboration with module partners

Open modular ecosystem

Goal: Create a flexible platform that supports micro-entrepreneurship.

Collaboration

Open to discussion and collaboration

Interested in:

- Industry feedback
- Pilot testing opportunities
- Collaboration with mobility startups
- Modular ecosystem development

I'm currently seeking mobility startups and partners interested in exploring this platform concept.
